

Dr Vivek Gaur

No-Bone Case Completed **in Just 48 Hours !!**

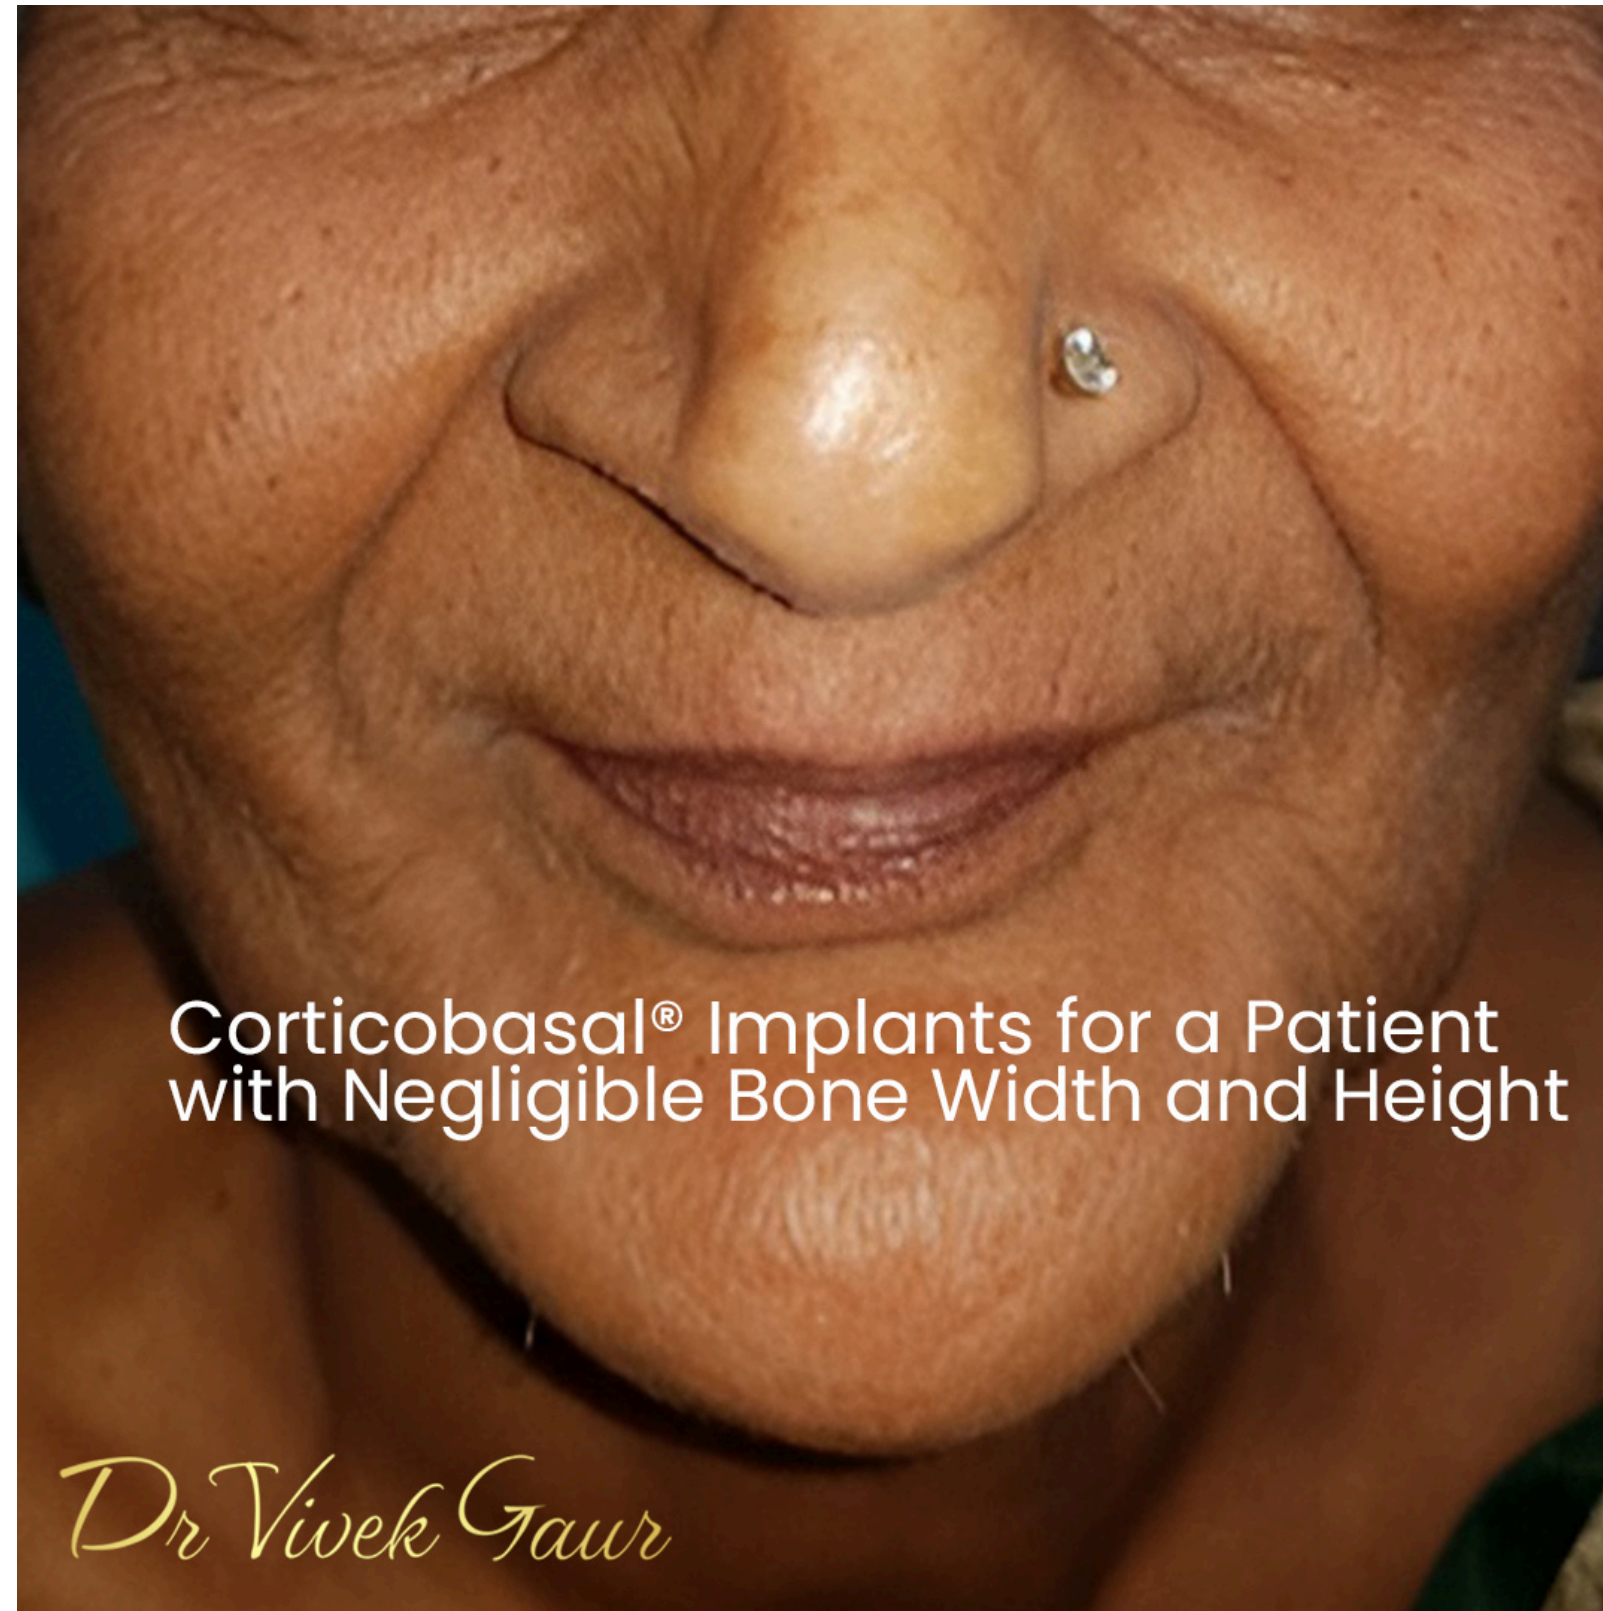

The patient arrived with a classic no-bone case, seemingly impossible to treat.

In the upper jaw, there was no bone width. In the lower jaw, neither bone width nor height was present. Conventional implants were out of the question, as they require ample bone width and height. Bone grafting was too risky, with a high failure rate.

With no cuts, no swelling, and no bleeding, **Dr. Vivek Gaur** performed and completed this case within 48 hours with **corticobasal® implants**. The lower jaw's dental nerve was expertly bypassed. The upper jaw's sinus was bypassed. This is Immediate Functional Loading Implantology at it's Finest.
