

Dr Vivek Gaur

Our patient struggled with eating due to **loose teeth** and **pyorrhea**.

Day 1: We removed the teeth, treated the infected gums, and placed the implants. By evening, we ensured the perfect fit for the new teeth.

Day 2: The fixed teeth were securely placed on the implants, and by the evening, our patient was already enjoying meals comfortably

All dental implant cases performed at our centre are completed in 2 days with the most innovative and result-oriented corticobasal science.
